

- The innovative design of the Giles Environmental Hood allows foodservice operators to clean the air exhausted into the environment. Not only do captured contaminants and particles result in cleaner air, but exhaust duct, roof, and building exterior are kept cleaner as well.
- The Giles Environmental Hood is a one-of-a-kind, type 1, stainless steel unit, which incorporates our patented Electrostatic Air Cleaner and patent pending Ultra Violet light, to provide vapor removal requirements for various models of equipment.
- The fire suppression system used in the Giles Environmental Hood is an Ansul R-102A fire suppression system. Our system contains piping, plenum nozzle, and conduit for routing the fusible link cable through the hood. Final installation, charging and testing of the system must be performed by an authorized Ansul distributor. This is the sole responsibility of the customer and is not included in the hood purchase.

Design Features

Environmental Hood System

This Environmental Hood consists of a Five stage Air Purification System.

- Stage *1.** Two Stainless Steel Baffle Filters trap large grease particles.
- Stage 2.** Two Disposable Pre-Filters trap smaller grease particles.
- Stage 3.** Two Electrostatic Air Cleaning (EAC) Filters use ionizers to charge particles of dirty air allowing them to be collected by an electrostatic force.
- Stage *4.** Two Disposable Charcoal Filters help eliminate odor.
- Stage 5.** Two Ultra Violet Lamps help eliminate any remaining grease laden vapors and improve emission control.
